

OPTIMUM FLUSH/SPACER

Applications:

Trican Optimum Flush / Spacer (O.F.S) is a fast hydrating slurried polymer designed to remove drilling fluids ahead of cement applications. O.F.S can be used alone or with weighting agents. O.F.S will help to prevent channeling of the cement through the mud as well as increase mud push / displacement efficiency.

Properties:

- Optimum Flush / Spacer
- Slurried polymer with surfactants
- Five-gallon pails

Advantages:

- Two-minute hydration process
- Environmentally friendly
- Excellent mud push characteristics
- Optimum concentration of OFS can be determined on location (based on yield point of mud prior to cementing).

Disadvantages:

- Reduced hydration properties in higher pH environments.
